

Accessing Microsoft OneDrive

Your university (ULCN) account is a Microsoft account, and it allows access to office tools from Microsoft 365 (previously Office 365), including cloud storage in OneDrive.

Here we describe ways to access that cloud storage from your Linux or MacOS computer.

- [Mounting OneDrive on Linux](#)
- [Mounting OneDrive on MacOS](#)
- [Access OneDrive via Browser](#)

Alternatively, one can install the OneDrive web app on Linux (or MacOS). This works in the same way that we have documented (with screenshots) for [Teams](#).

This is not the same as mounting the drive or making it accessible in the local file manager; the web app allows you to browse through your files, and it allows you to download or upload documents.
