The Clustered Universe

Het geclusterde heelal

Proefschrift

ter verkrijging van
de graad van Doctor aan de Universiteit Leiden,
op gezag van Rector Magnificus prof. mr. C.J.J.M. Stolker,
volgens besluit van het College voor Promoties
te verdedigen op woensdag 30 oktober 2013
klokke 15:00 uur

door

Steven Rieder
geboren te Zwolle
in 1983

Promotiecommissie

Promotores:	Prof. dr. Simon Portegies Zwart	
	Prof. dr. Cees de Laat	(Universiteit van Amsterdam)
Overige leden:	Prof. dr. Henri Bal	(Vrije Universiteit Amsterdam)
	Dr. Paola Grosso	(Universiteit van Amsterdam)
	Prof. dr. Steve McMillan	(Drexel University)
	Prof. dr. Huub Röttgering	
	Prof. dr. Joop Schaye	
	Prof. dr. Tom Theuns	(Durham University)
	Prof. dr. Rien van de Weygaert	(Rijksuniversiteit Groningen)

ISBN: 978-94-6191-915-1

Dit proefschrift werd ondersteund door NWO IsFast grant #643.000.803 en het Leids Kerkhoven Bosscha fonds.

Nou moe!?!
-- Guust[1]

[1]Franquin (1972)

Omslagontwerp: Floor Rieder

Contents

Acronyms **ix**

1 Introduction **1**
1.1 Why simulate the Universe? . . . 2
1.2 Simulating gravity on a large scale . . . 2
1.2.1 Finding the initial conditions . . . 2
1.2.2 The Millennium run . . . 3
1.3 Work in this thesis . . . 5
1.3.1 The CosmoGrid project . . . 5
1.3.2 Obtaining computational power (Chapter 2) . . . 5
1.3.3 Results of CosmoGrid (Chapter 3) . . . 7
1.3.4 Galaxies in the void (Chapter 4) . . . 7
1.3.5 Star clusters in a dark matter halo (Chapter 5) . . . 7
1.3.6 Open clusters in a galaxy (Chapter 6) . . . 7

2 Cosmological simulations on a grid of supercomputers **9**
2.1 Introduction . . . 10
2.1.1 Related work . . . 10
2.2 Improvements to SUSHI . . . 11
2.3 Tests on a single site . . . 11
2.3.1 Setup . . . 11
2.3.2 Results . . . 12
2.4 Tests across three sites . . . 13
2.4.1 Setup . . . 13
2.4.2 Results . . . 14
2.5 User Experiences . . . 15
2.6 Conclusion . . . 16

3 The CosmoGrid simulation **19**
3.1 Introduction . . . 20
3.2 Initial Conditions and Numerical Method . . . 22
3.3 Results . . . 25
3.3.1 Mass Function . . . 25
3.3.2 Density Structures of Most Massive Halos . . . 30
3.3.3 Concentration Distributions . . . 32
3.3.4 Spin Distributions . . . 36
3.3.5 Subhalo . . . 39
3.4 Discussions and Summary . . . 42
3.A The Effect of Dynamical State of Halos . . . 43

4 Assembly of filamentary void galaxy configurations **47**
4.1 Introduction . . . 48
4.1.1 The Void Galaxy Survey . . . 49
4.1.2 Outline . . . 50
4.2 Simulations . . . 52
4.2.1 Setup . . . 52
4.2.2 Selection of the simulated haloes . . . 53
4.2.3 Analysis of the environment . . . 55
4.3 Evolution of void haloes . . . 58
4.3.1 Halo Structure . . . 59
4.3.2 Halo Assembly and Evolution . . . 60
4.3.3 Dynamical Evolution . . . 61
4.4 Large scale environment . . . 64
4.4.1 The web-like environment of CGV-G . . . 64
4.4.2 The wall-like environment of CosmoGrid Void systems (CGVs) . . . 68
4.4.3 Intravoid Filaments . . . 69
4.4.4 Evolution of the intravoid cosmic web . . . 70
4.5 CGV halo configurations and VGS_31: a comparison . . . 76
4.5.1 Size evolution of the CGVs . . . 79
4.5.2 Energy considerations . . . 79
4.5.3 The origin of VGS_31 . . . 81
4.6 Discussion & Conclusions . . . 81

5 Evolution of star clusters in a cosmological tidal field **85**
5.1 Introduction . . . 85
5.2 The experimental setup . . . 87
5.2.1 The CosmoGrid N-body simulation . . . 87

5.2.2 Halo catalogue 87
5.2.3 The clusters 88
5.2.4 The tidal field 93
5.2.5 Combining the clusters and the tidal field 93
5.2.6 Escaping and bound stars 95
5.2.7 Validation 95
5.3 Results 96
5.3.1 The evolution of the selected haloes 96
5.3.2 The evolution of the star clusters 98
5.4 Discussion and conclusions 104

6 Evolution of star clusters in an evolving galaxy 109
6.1 Introduction 110
6.2 The experimental setup 111
6.2.1 The galaxy simulation 111
6.2.2 Star cluster models 112
6.2.3 Embedding star clusters in the galaxy 113
6.3 Results 114
6.3.1 Tidal fields 114
6.3.2 Cluster evolution 117
6.3.3 Comparison to observed open clusters 119
6.3.4 Influence of eccentricity on cluster properties 120
6.3.5 White dwarfs as a signature for tidal field strength 120
6.4 Discussion and conclusions 122

7 Samenvatting 123
7.1 Afstanden in het heelal 123
7.2 Samenstelling van het heelal 124
7.3 Simulaties 126
7.4 De hoofdstukken in dit proefschrift 127
7.4.1 Simulaties op gecombineerde supercomputers 127
7.4.2 De CosmoGrid simulatie 127
7.4.3 Ontstaan van sliertige melkwegen in leegtes 128
7.4.4 Evolutie van bolhopen in halo's van donkere materie . . . 129
7.4.5 Evolutie van sterrenhopen in een melkweg 129

Bibliography 130

Curriculum Vitae 147

Nawoord **149**

Acronyms and used codes

Acronyms

2dFGRS	Two-degree-Field Galaxy Redshift Survey
CDM	Cold Dark Matter
CGV	CosmoGrid Void system
CMB	Cosmic Microwave Background
DEISA	Distributed European Infrastructure for Supercomputing Applications
GBBP	Gravitational Billion Body Problem
GLIF	Global Lambda Integrated Facility (`http://glif.is`)
ΛCDM	Lambda Cold Dark Matter
SDSS	Sloan Digital Sky Survey
SPH	Smoothed-particle hydrodynamics
TCP	Transmission Control Protocol
TreePM	Tree-Particle-Mesh
VGS	Void Galaxy Survey
WMAP	Wilkinson Microwave Anisotropy Probe

Used codes

AMUSE	Astrophysical Multipurpose Software Environment
Bonsai	GPU-enabled Tree code (Bédorf et al. 2012)
Consistent Trees	Gravitationally Consistent Halo Catalogs and Merger Trees for Precision Cosmology (Behroozi et al. 2013b)
DTFE	Delaunay Tesselation Field Estimator
FFTW	Fastest Fourier Transform in the West (Frigo and Johnson 2005)
Fi	N-body/SPH code
GRAFIC	Code to generate initial conditions for cosmological simulations
GreeM	GRAPE TreePM (Yoshikawa and Fukushige 2005; Ishiyama et al. 2009b)
MPGRAFIC	Parallellised version of GRAFIC
MPWide	Light-weight communication library for distributed computing (Groen et al. 2010)
NEXUS+	Algorithm for the identification of Cosmic Web Environments (Cautun et al. 2013)
ph4	GPU-enabled direct N-body code
Rockstar	Robust Overdensity Calculation using K-Space Topologically Adaptive Refinement (Behroozi et al. 2013a)
SUSHI	Simulating the Universe Structure formation on Heterogeneous Infrastructures (Groen et al. 2011)
